**Hiring Manager**  
Blue Origin  
21218 76th Ave S  
Kent, WA 98032

Dear Hiring Manager,

I'm applying for the position of Project Engineer II to support the 9 Engine Mid Module on the New Glenn Rocket. Blue Origin's goal of enabling reusable, human-capable spaceflight excites me as a mechanical engineer with an emphasis on aerospace. I offer practical project management experience as well as a data-driven strategy for maintaining schedule alignment, material readiness, and requirements.

In my roll-control senior capstone project, I designed and iterated components in CAD, assisted with testing, and used CFD, Python, and Excel to analyze results and guide subsequent steps. Through my various concepts and revisions, I also maintained the organization of project timelines, drawings, BOMs, and build documentation, which is directly related to verifying demand signals and fixing mismatches between engineering and manufacturing BOMs.

In my previous internship as a Project Engineer intern, I coordinated with engineering and vendors to track submittals, clarify technical details, and keep long-lead items on pace to schedule. I'm comfortable communicating risks and priorities among teams, reading drawings, and converting requirements into information that is procurement ready.

Thank you for your time and consideration. I would greatly appreciate the opportunity to discuss how I can help improve readiness and on-time delivery for this subsystem.

Sincerely,

**Oliver Braitsch**
